Academic Press
New York and London

Statement of ownership, management and circulation required by the Act of October 23, 1962, Section 4369, Title 39, United States Code; of

TOXICOLOGY AND APPLIED PHARMACOLOGY

Published bimonthly at 14 and 16 Lower Regent Street, London, S.W.1, England for Academic Press Inc., 111 Fifth Avenue, New York, N.Y. 10003. Editor: Earl H. Dearborn, Lederle Laboratories, Pearl River, N.Y. 10965.
Owned by Walter J. Johnson, Thekla Johnson, and Kurt Jacoby, 111 Fifth Avenue, New York, N.Y. 10003. Known bondholders, mortgagees, and other security holders owning or holding 1 percent or more of total amount of bonds, mortgages or other securities: None. Paragraphs 2 and 3 include, in cases where the stockholder of security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, also the statements in the two paragraphs show the affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner. Names and addresses of individuals who are stockholders of a corporation which itself is a stockholder or holder of bonds, mortgages or other securities of the publishing corporation have been included in paragraphs 2 and 3 when the interests of such individuals are equivalent to 1 percent or more of the total amount of the stock or securities of the publishing corporation.
Total no. copies printed, average no. copies each issue during preceding 12 months: 1900; single issue nearest to filing date: 1900. Paid circulation (a) to term subscribers by mail, carrier delivery or by other means, average no. copies each issue during preceding 12 months: 1525; single issue nearest to filing date: 1533. (b) Sales through agents, news dealers, or otherwise, average no. copies each issue during preceding 12 months; 0; single issue nearest to filing date: 0. Free distribution by mail, carrier delivery, or by other means, average no. copies each issue during preceding 12 months: 25; single issue nearest to filing date: 25. Total no. of copies distributed, average no. copies each issue during preceding 12 months: 1550; single issue nearest to filing date: 1558.

Information for Authors

Toxicology and Applied Pharmacology publishes papers dealing with original scientific research pertaining to alterations in tissue structure or function resulting from the administration of chemicals, drugs, or natural products to animal or man. Short reviews of subjects of unusual current interest to toxicologists will be considered.

Address: Earl H. Dearborn, Editor, Lederle Laboratories, Pearl River, New York 10965. Manuscripts are accepted for review with the understanding that the content has not been published previously and is not under consideration elsewhere.

Manuscripts: Two complete copies of each manuscript, in English, should be submitted. Manuscripts must be typewritten, double-spaced (including references), on one side of $8\frac{1}{2}'' \times 11''$ or $8\frac{1}{4}'' \times 11\frac{1}{2}''$ bond paper, with 1″ margins on each side. Arabic numerals will be used in the text except when a number begins a sentence, in which case it should be spelled out. The title page will include: the title of the paper, the name(s) and affiliation(s) of all authors, a running title of not more than 40 characters, and the name and address (including Zip Code) of the person to whom proofs are to be sent.

Index terms: A list of subject terms suitable for use in the index must be submitted on a separate sheet. The list should include chemical name(s), generic name(s), common name(s), and proprietary name(s) of all substances used in the experiments. It should also include biological activities of the substances investigated.

Title: This must be brief, comprehensive, and descriptive. Proprietary names must not be used in titles but may be identified in footnotes.

Footnotes: These are to be identified in the text by superscript arabic numerals consecutive throughout the paper. All footnotes should be listed in order on a separate sheet. Proprietary names of substances and names and addresses of suppliers should be identified in footnotes. If the paper has been presented orally in whole or in part, the date, place, and occasion should be included in a footnote.

Format: The text will ordinarily be organized under subheadings in the following order: Abstract, Introduction, Methods, Results, Discussion, Acknowledgments (on separate page), and References. Exceptions must be discussed with the Editor in advance. Text pages should be numbered consecutively from the abstract through the references but excluding footnotes, tables, and figures.

Abstract: The abstract must start with the title of the paper, followed by the authors' names and reference to *Toxicology and Applied Pharmacology*; blanks should be left so that the editor may fill in the volume and page numbers. The abstract will be limited to 250 words but must contain a concise summary of what was done, the results obtained, and valid conclusions which are drawn therefrom. It must mention the compounds used and the species of animals. It must contain all words which are used as index terms.

Example: The 90-Dose LD50 and a Chronicity Factor as Measures of Toxicity. Hayes, Wayland J., Jr. (1967). *Toxicol. Appl. Pharmacol.* 00, 00–00.

Introduction: State why the investigation was carried out, note any relevant published work, and delineate the objectives of the investigation.

Methods: New methods or significant improvements of or changes in old methods must be described. Methods for which an adequate reference can be cited are not to be described.

Results: Duplication between the text of this section and material presented in tables and figures should be avoided if possible. Tabular presentation of masses of negative data must be avoided and replaced with a statement in the text whenever possible. The statement must include (*a*) what was done, (*b*) how it was done, (*c*) how the data were analyzed, (*d*) a measure of variability, and (*e*) the significance of the result.

Discussion: This section must relate the significance of the work to existing knowledge in the field and indicate the importance of the contribution of this study. Needless, detailed recapitulation of results must be avoided. Unsupported hypotheses and speculation are to be avoided.

References: Names of authors are to be cited in text with year of publication in parentheses. When there are more than two authors, only the first author's name is to be used followed by *et al.* All papers mentioned in the text must be listed in the References and *vice versa.* Abbreviations of journal names must follow the style of *Chemical Abstracts.* Articles in foreign languages must be listed in the language of the original article. References must be listed alphabetically at the end of the paper as follows, *with all authors included*:

FITZHUGH, O. G., BOURKE, A. R., NELSON, A. A., and FRAWLEY, J. P. (1959). Chronic oral toxicities of four stearic acid emulsifiers. *Toxicol. Appl. Pharmacol.* **1,** 315–331.

Book references should follow this form: author's name, year of publication, title, edition if other than first, editor's name (if any), pages referred to, publisher's name, place of publication.

DUKES, H. H. (1955). *The Physiology of Domestic Animals*, 7th ed., pp. 501–502. Cornell Univ. Press, Ithaca, New York.

Tables: Each table must be on a separate sheet with the title typed directly above the table. The title and footnotes must contain all the information necessary to understand and interpret the table without reference to the text. Tables must be numbered consecutively with arabic numerals. Footnotes should be identified by superscript letters (lower case) and the footnotes should be placed at the bottom of the page containing the table.

Figures: These are to be numbered consecutively in arabic numerals, and all legends are to be typed on a separate sheet, double-spaced. Lettering on the original should be large enough to be legible after reduction to one-third. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2}'' \times 11''$, with coordinates properly labeled; grid lines that are to show in the engraving should be inked in black. Photographs (which must be kept to a minimum) should be submitted as glossy prints ($5'' \times 7''$ or $8'' \times 10''$), unmounted, and not marred by staples, paper clips, or pencil marks. *Original drawings no larger than* $8\frac{1}{2}'' \times 11''$ *or* $8\frac{1}{4}'' \times 11\frac{1}{2}''$ *are preferred.*

High contrast photomicrographs not larger than $3\frac{1}{2}'' \times 4\frac{1}{2}''$ should be submitted in duplicate. This size will eliminate reduction and avoid changes in the magnification given in the legend.

Electron micrographs should be submitted not larger than $6\frac{1}{2}'' \times 4\frac{3}{4}''$. Magnifications should be indicated in the legend or as a scale.

Abbreviations: meter, m; centimeter, cm; millimeter, mm; micron, μ; millimicron, mμ; kilogram, kg; gram, g; milligram, mg; microgram, μg; millimicrogram, mμg; milliliter, ml; microliter, μl; molar, M; millimolar, mM; micromolar, μM; normal, N; millicurie, mCi; microcurie, μCi; counts per minute or second, count/min, count/sec; disintegrations per minute or second, dpm, dps; subcutaneous, sc; intracutaneous, ic; intramuscular, im; intraperitoneal, ip; intravenous, iv; median lethal dose, LD50; median lethal concentration, LC50.

Reprints: A reprint order form will accompany proofs. Fifty reprints are granted free of charge.

Toxicology and Applied Pharmacology will accept a limited number of brief reports of work that has progressed to the stage where it is considered that the science of Toxicology would be advanced if the results were made available as soon as possible. These reports will be designated "Communications." Authors should submit short papers for this category of publication only when they believe that the rapid communication of their results is of the utmost importance to other investigators. The manuscript must be submitted in duplicate and conform strictly to the form and style of the journal. The length must be such that it will require no more than two pages in the present format of the journal.
